<http://shubhamsunny.com/>

Results-oriented Software Engineering Professional targeting to contribute expertise in product development, technical leadership, and solution delivery to build impactful digital experiences. Passionate about driving innovation, enabling business growth, and creating long-term value through collaboration, continuous improvement, and engineering excellence.

PROFILE SUMMARY

- Senior Software Developer with over 7 years of experience in specializing in Front-end Development, delivering scalable web applications, enterprise platforms, and digital products from concept to production across diverse business domains.
- Expertise in building high-performance, data-intensive applications using modern front-end technologies, advanced state management, responsive design, and performance optimization techniques to deliver exceptional user experiences at scale.
- Strong Full Stack Development experience spanning front-end architecture, back-end integration, API development, cloud deployment, and end-to-end product ownership across the software development lifecycle.
- Proven track record of architecting and developing enterprise-grade solutions, including Server-Driven UI (SDUI), Plugin-Based Platforms, Offline-First PWAs, and large-scale data systems processing 1M+ records, with a focus on scalability, maintainability, and operational efficiency.
- Showcased leadership in mentoring engineering teams, driving technical decision-making, enforcing engineering best practices, and collaborating with cross-functional stakeholders to deliver business-critical solutions.
- Experienced in integrating AI-powered capabilities, intelligent automation, and data-driven workflow into modern applications, enabling innovation, process optimization, and measurable business impact.

TECHNICAL SKILLS

- Front-End Engineering:** HTML5, CSS3, JavaScript (ES6+), TypeScript, React, Next.js, Redux, Zustand, TanStack Query, RTK Query, Chart.js, Tailwind CSS, Ant Design, Material UI, Responsive UI Design, UI/UX, Usability, Design Quality, Interaction Patterns, Dashboard Polish, Performance Optimization
- Back-end & APIs:** Node.js, Express.js, REST APIs, GraphQL, WebSockets, JWT Authentication, OAuth 2.0, API Development & Integration
- AI & Automation:** OpenAI APIs, LangChain, LangGraph, PydanticAI, AI Agent Development, RAG Systems, Prompt Engineering, Browser Automation, Web Scraping, Real-Time AI Applications
- Databases & Cloud:** MongoDB, PostgreSQL, Firebase, Supabase, AWS, Vercel, Netlify, Cloud-Based Application Deployment
- DevOps & Development Tools:** Git, GitHub, GitHub Actions, Docker, Kubernetes, CI/CD Pipelines, Vite, Webpack, Postman

CORE COMPETENCIES

- Scalable System & Application Architecture
- Frontend Architecture & Performance Engineering
- AI-Driven Application Development & Intelligent Automation
- Full-Stack Product Engineering
- Distributed & Server-Driven UI Architecture (SDUI)
- Component-Driven Software Development
- API Design, Integration & Microservices Architecture
- Real-Time Data Processing, Visualization & Analytics
- State Management & Client-Side Engineering
- Cloud-Native Application Development
- System Design, Scalability & Reliability Engineering
- Technical Leadership & Cross-Functional Collaboration

EDUCATION

- National Institute of Technology, Kurukshetra (NIT KKR): B.Tech. - Information Technology | 2018

PERSONAL DETAILS

- Date of Birth: 1st September 1997
- Languages Known: English

• **Architecture & System Design:** Scalable System Design, Frontend Architecture, Component-Driven Development, State Management, API Integration, Performance Engineering, Distributed UI Systems, Server-Driven UI (SDUI) Architecture

• **Domain & Platform Exposure:** Salesforce CRM Platform, CRM Platforms, Pharma Domain

ACHIEVEMENTS

- Architected and delivered enterprise web applications, analytics platforms, and automation solutions that streamlined business workflows and accelerated data-driven decision-making.
- Built scalable frontend architectures and reusable UI systems using React, Next.js, TypeScript, and Redux, improving development velocity, maintainability, and consistency across products.
- Optimized performance of large-scale data-intensive applications handling millions of records through virtualization, efficient state management, caching strategies, server-side pagination, and advanced rendering techniques, resulting in faster load times, smoother user experiences, and improved application responsiveness.
- Integrated AI-powered capabilities, intelligent automation workflows, and machine learning-driven insights into production applications by leveraging OpenAI APIs, agent-based architectures, and data science models, enabling users to automate complex processes, extract actionable insights, and improve decision-making efficiency.

WORK EXPERIENCE

Senior Software Developer – Yum! Brands | *Sept 2020 – Present*

- Leading the design and development of enterprise-grade web applications, automation platforms, and data-driven solutions, delivering scalable products that improve operational efficiency and enable faster business decision-making.
- Architecting and building high-performance front-end solutions, including Server-Driven UI (SDUI) frameworks, real-time dashboards, analytics platforms, and intelligent workflow applications, focusing on scalability, flexibility, and exceptional user experiences.
- Developing and optimizing large-scale data-driven applications capable of managing 1M+ records, implementing advanced UI patterns, performance optimization strategies, and scalable architecture to support enterprise workloads.
- Collaborating with Data Science, Product, and Engineering teams to integrate AI/ML capabilities and intelligent automation workflow into production applications, converting complex data insights into actionable business solutions.
- Driving end-to-end product development from requirement analysis and solution architecture to implementation, deployment, and continuous enhancement, ensuring reliable and maintainable enterprise platforms.
- Providing technical leadership and mentoring to engineering team members through design discussions, code reviews, best-practice adoption, and knowledge sharing to improve development quality and delivery outcomes.

Software Developer – Kvantum Marketing Insights (Acquired by Yum! Brands) | *Sept 2020 – April 2021*

- Developed high-performance, data-heavy analytics dashboards for marketing intelligence platforms.
- Built scalable front-end systems using React ecosystem with Ant Design and Redux for complex state-driven visualization layers.
- Optimized rendering and data transformation logic to enable smooth visualization of large-scale marketing datasets.

Frontend Developer – Tolexo Online Pvt. Ltd. | *Sept 2019 – Sept 2020*

- Engineered scalable front-end architecture for a large-scale B2B e-commerce platform.
- Developed reusable UI component libraries to improve development efficiency and maintain consistency across modules.
- Enhanced page performance and load optimization for high-traffic buyer-seller workflow.

Software Associate – Triyama Software Pvt. Ltd. | *April 2019 – Sept 2019*

- Delivered full-stack features using Node.js and Angular in a fast-paced agile environment.
- Built and maintained APIs and front-end modules for enterprise web applications.
- Strengthened core engineering fundamentals by solving production-level issues across UI, back-end, and integration layers.

ANNEXURE

Major Projects:

Massive Data Explorer

<https://mde-web.onrender.com>

- Designed and developed a full-stack analytics platform using **React, HTML5, CSS3, JavaScript, TypeScript**, and **Chart.js**, supporting 1M+ records with cursor-based pagination, server-side filtering, and sorting.
- Implemented TanStack Virtual rendering with optimized infinite scroll managing ~30 DOM rows for high performance.
- Architected strict separation of UI state (Redux), server state (RTK Query), and persistence layer (IndexedDB).
- Built a runtime “Control Center” with 21 system toggles to dynamically simulate performance trade-offs (caching, virtualization, debouncing).
- Established a TypeScript monorepo with shared Zod schemas, comprehensive testing using Vitest, Playwright, and axe-core.
- An Interactive analytics dashboards using **Chart.js**, focusing on **dashboard polish, usability**, and responsive **UI/UX** for large-scale data visualization.
- Built responsive dashboards with a strong focus on **UI/UX, usability, interaction patterns, design quality**, and **dashboard polish**, improving the overall user experience

Offline-First Task Management PWA

<https://offline-first-task-management-app-ui.onrender.com>

- Built an offline-first PWA using **React, HTML5, CSS3, JavaScript, and TypeScript**, enabling full functionality without network connectivity while maintaining excellent **UI/UX** and **usability**.
- Designed a resilient sync engine with idempotency keys, retry strategies, and conflict resolution for offline transactions.
- Extended RTK Query with Dexie-based offline persistence for seamless local-first data interaction.
- Implemented cross-tab synchronization, Workbox caching strategies, and production-grade offline testing framework.
- Designed intuitive offline workflows with a strong focus on **usability, responsive UI/UX**, and seamless user interactions.

Server-Driven UI Platform

<https://sdui-pypy.onrender.com>

- Architected a server-driven UI system where JSON schemas define UI structure, forms, workflow, and actions.
- Built a recursive rendering engine with reusable **interaction patterns**, improved **design quality**, and consistent **UI/UX** across dynamically generated applications.
- Implemented RBAC and feature-flag-driven UI personalization at the server level.
- Delivered SDUI Live Studio for schema visualization, debugging, and role-based UI simulation.

Frontend Plugin Platform

<https://fpp-host.onrender.com>

- Designed a plugin-based front-end ecosystem using **React, HTML5, CSS3, JavaScript, and TypeScript**, delivering reusable components with excellent **UI/UX, interaction patterns**, and **dashboard polish**
- Enabled feature delivery via marketplace-style plugin installation without requiring core application redeployment.
- Built SDK, event-driven plugin communication system, and Zod-validated contracts for safe integration.
- Implemented runtime isolation, plugin lifecycle management, and fault-tolerant execution layers.
- Designed reusable plugins with consistent **interaction patterns, design quality**, and responsive **UI/UX** to improve user experience across enterprise applications.

NPM Modules – Server Driven UI Framework

<https://www.npmjs.com/~shubhamsunnynitkkr>

- Developed a modular server-driven UI framework published as 3 production-ready npm packages.
- Built a schema-driven rendering engine decoupling UI logic from business logic using registry-based architecture.
- Supported conditional rendering, dynamic forms, and declarative workflow using JSON schemas.
- Delivered tree-shakable ESM/CJS builds with TypeScript contracts and 80%+ test coverage.
